

# Wet Wipes Package Weight Loss Study

## Method

The testing consisted of the removal of two wipes from each of three different SKU's of nationally branded wet wipes packages.

A third party independent lab certified the package weight loss results at the start, after eight hours, and after 24 hours of the wipes being removed.

The packages were placed in an atmospheric chamber set at 90 degrees F in ambient humidity. Results after 24 hours are projections based off of the initial eight and 24 hour data.

## Summary

Results indicate that wet wipes packages utilizing AWT's Patented Solid Seal Label hold moisture inside the package significantly better over time (after the first wipes has been removed) versus wipes packages utilizing a hard plastic injection molded fitment.
